The Center for Health, Environment and Justice

A Project of the People's Action Institute

The Center for Health, Environment & Justice (CHEJ) is a project of People's Action Institute. CHEJ was founded in 1981 by Lois Gibbs, the community leader who led the successful fight to relocate over 800 families away from the Love Canal toxic waste dump in Niagara Falls, NY. CHEJ mentors a national movement to build healthier communities by empowering people to prevent harm caused by toxic chemical threats. CHEJ helps people by providing the tools, direction, and encouragement to advocate for safe and healthy communities. To date, CHEJ has assisted over 12,000 groups nationwide.

I. Executive Summary

Lois Gibbs, the Executive Director and founder of the Center for Health, Environment and Justice, is known as the mother of Superfund because her actions at Love Canal led to the creation of the law (abbreviated as CERCLA or “Superfund”). Since its creation, CHEJ has been closely studying Superfund. Recently, Superfund has gained media attention as Trump has touted making significant progress on Superfund through his attempts to make the program a central part of his EPA. Here, we offer an in depth analysis of Trump’s work on Superfund.

In this report, we evaluate the Trump administration’s work on the Superfund program and his efforts to return Superfund cleanups “to their rightful place at the center of EPA’s core mission” in order to “protect the health of our citizens and the environment in which we all live.” We focus specifically on the work done by the EPA’s Superfund Task Force over the past two years.

We found that:

1. Currently, the Superfund program is funded entirely through congressional budget appropriations, and it’s funding has been consistently decreasing for the past two decades.
2. Trump is giving Superfund significantly less money than past administrations. In fact, Superfund received its lowest operating budget since its inception in the ‘80s under Trump in FY2018.
3. 79.6% of sites targeted by the Trump administration for cleanup had Potentially Responsible Parties (PRPs), and the administration is financing cleanups by reaching settlements with these responsible parties.
4. Because of this focus on PRPs, orphan sites, or sites with no clear outside funding source for their cleanup, are largely ignored under the Trump administration. Out of 54 sites that Trump has focused on, only 5 could be confirmed as orphan sites.
5. Trump’s Superfund program is serving mostly white people. 61.1% of sites he has targeted are in majority white areas. Overall, the population living around Trump’s Superfund sites is whiter than the population living around all Superfund sites nationally.

While Trump has set himself apart from other administrations in the work he has done on Superfund, his progress is not as comprehensive as his speeches make it sound. Historically, there have been two ways to fund Superfund cleanups. The first was through budget appropriations set every year based on how much money EPA received through the federal budget. The second was through Polluter Pays Fees, which were taxes collected from polluters, or companies that produced chemicals, oil and hazardous waste. The two sources of funding together provided a significant endowment known as Superfund Trust Fund, which was used to clean up the most toxic hazardous waste sites in the country. Today, Polluter Pays Fees are no longer collected—the only way Superfund gets its money is through EPA budget appropriations (see Appendices A and B for a detailed explanation of why Polluter Pays Fees are no longer collected).

Over the years, Superfund's success has been directly related to how much money it has. Since Polluter Pays Fees are no longer being collected, Superfund's budget is entirely dependent on the EPA's budget. Even though Trump may be making the Superfund the center of his EPA, his EPA has an incredibly limited budget, and thus his Superfund budget is also incredibly limited— in fact, Trump's Superfund is actually the smallest it has been since 1986.

This funding shortfall informs the Trump administration's entire Superfund strategy. There are two ways to get a Superfund cleanup funded: the first is to tap into the Superfund money, and the second is to use CERCLA to force the company who created the pollution to pay for its clean up. Those responsible for hazardous waste pollution at a Superfund site are known as Potentially Responsible Parties, or PRPs. Eighty percent (80%) of the cleanups Trump's EPA has worked on are at sites with Potentially Responsible Parties that can finance the cleanups. In many ways, this is an economical strategy for the current EPA to use: the purpose of Superfund legislation is to ensure that polluters are paying for hazardous waste cleanups, and Trump's EPA is genuinely taking advantage of that in a way that past administrations have not.

However, what happens for sites that don't have Potentially Responsible Parties? It can take decades to clean a Superfund site, and for many sites that have been on the NPL for years the companies, or PRPs, that initially caused the pollution are long gone. These sites are called orphan sites, and they represent some of the most vulnerable of Superfund sites. They are particularly vulnerable because their cleanup involves more than just removing or eliminating the hazardous waste: these are places that are so polluted, it is no longer safe for people to live there. For many orphan sites, people cannot afford to move both because they are largely low income and because Superfund designation causes property values to plummet, rendering most people's houses essentially worthless. These sites require more funding, because EPA must both clean up toxic waste and buy out people's homes so that they can move. Because these sites have no responsible parties, all of this money must come directly out of the Superfund, or as is the case today, directly from EPA's budget. Under Trump's EPA, these sites are being mostly ignored.

Superfund under Trump is a mixed bag. He's revitalized the program by identifying PRPs for different Superfund sites and using CERCLA to ensure that they pay for the site's cleanup. He's capitalizing on the work began by previous administrations to get sites fully deleted from the National Priority List once PRPs have been determined. However, Trump's significant EPA budget cuts have made Superfund's operating budget the smallest it has ever been, and it keeps getting smaller. If this trend of Superfund losing money continues, there will be no way to fund cleanups for orphan sites, and the people who are stuck there will keep suffering.

The current state of Superfund proves that it is absolutely essential for Polluter Pays Fees to be reinstated. The longer Superfund sites go without being cleaned, the more people are injured from hazardous waste exposure. Even the recent progress at some Superfund sites is not enough, especially since orphan sites are ignored. As long as Superfund's budget keeps decreasing, people living near orphan sites will continue suffering. No person deserves to be stuck in a toxic environment: in order to combat this, we must increase the money available to Superfund by reinstating the Polluter Pays Fees.

II. Background & Introduction

A Brief Introduction to Superfund

Out of all contaminated areas in the United States, Superfund sites are the most toxic and pose the most significant health risks to those living near them. According to 2017 data from the U.S. Environmental Protection Agency (EPA), nearly 53 million Americans, many of whom are children or elderly, live within 3 miles of a Superfund site.¹ These people depend on the Superfund program for their health and safety.

The government created the federal Superfund program in 1980 in response to serious threats posed by toxic waste sites across the country, like the infamous Love Canal landfill in Niagara Falls, NY. Since then, the EPA has completed the cleanup of nearly 1,200 of the nation's most contaminated toxic waste sites, protecting hundreds of communities and drinking water supplies.

While the EPA has cleaned some Superfund sites, 1,344 sites as of June 2019 remain on the current National Priorities List (NPL), EPA's list of contaminated sites targeted for cleanup.

Superfund: Who is Affected?

Hazardous waste disproportionately affects the most marginalized members of our society. Historically, low income communities and communities of color are most likely to be affected by toxic waste. The concept of "Environmental Racism" refers to the fact that people of color are generally relegated to experiencing the worst pollution. An EPA-sponsored report indicates that people of color are much more likely to live near toxic facilities and breathe in polluted air than white people.² The same study found that people in poverty are exposed to more dangerous particulate matter than people out of poverty.

Black children experience higher rates of asthma and heart disease than white children. Furthermore, this study found that the magnitude of pollution in communities of color is higher than the number of polluters suggest, indicating that discrimination may be involved.³ A 2013 study on race and Superfund sites found that of the 29.4% of Blacks living in South Carolina, 55.9% live in a census tract that has a Superfund site, and that people of color and low income people overall were more likely to live closer to Superfund sites.⁴

There is evidence that inconsistencies exist within the Superfund program as well: a study found that in the early '80s, racial discrimination impacted the rate at which Superfund sites were cleaned.⁵ However, the study also found that since 1994, the main focus of the Superfund program has been serving the poorest communities first.⁶ A 2015 Government Accounting Office (GAO) report studying budget allocations of Superfund reflects this attitude, but also implies that past administrations have focused on serving orphan Superfund sites, or sites with no clear responsible party to finance the cleanup, because these are the most vulnerable.⁷ However, it's probable that politics was the true motivator behind past administrations' focus on orphan sites: many of the would be PRPs at Superfund sites are corporations with significant ties to past administrations.

Superfund's Budget Decline Over Time

The decreased budget of the Superfund program has led to a dramatic reduction in the number of sites cleaned up. From 1997 to 2000, EPA averaged 87 completed cleanups a year.⁸ From 2000 to 2006, the number of site cleanups dropped from 87 to 40.⁹ Then, another drop occurred with only 24 site cleanups

in 2007 and 30 in 2008.¹⁰ During the Obama Administration, completed cleanups dropped even further, from 20 in 2009 to only 8 in 2014, a decrease of more than 90% compared to the 1997 to 2000 time period.¹¹ The number of sites where cleanup action has started has also decreased dramatically. As stated in the 2015 GAO report,

“Because EPA prioritizes funding work that is ongoing, the decline in funding led EPA to delay the start of about one-third of the new remedial action projects that were ready to begin in a given fiscal year at nonfederal NPL sites from fiscal years 1999 to 2013.”¹²

A 2007 study by the Center for Public Integrity found that cleanup work started at only 145 sites during the six-year period from 2001 to 2007, compared to a start-up rate nearly three times greater for the previous six years.¹³ The study also found that EPA officials said that they have had to delay needed work at some hazardous waste sites, use rapidly dwindling money left over from other cleanups, and resort to cheaper, less effective remedies.¹⁴

Furthermore, the problem of recalcitrant polluters has escalated because of the funding shortfall. Negotiations between the EPA and polluters over cleanup costs are lengthy, sometimes lasting for years. In the 1990s, Superfund had the capital to pay upfront for a site cleanup when faced with a noncompliant polluter.¹⁵ Post-cleanups, EPA could file cost-recovery actions against a polluter to recover the money taken from the fund to pay for the cleanup, hereby prioritizing human health over prolonged bargaining.¹⁶ The Superfund law gives EPA the authority to collect as much as triple damages from polluters in court. Faced with the threat of a cost recovery action, polluters were more likely to agree to fund cleanups.¹⁷

For most of the 21st century, corporate polluters realized that EPA did not have the funds to threaten them with a lawsuit because the agency did not have the funds to pay upfront for the cleanup. Without the threat of corporate polluters potentially having to pay triple damages if they refused to fund a cleanup, EPA’s enforcement powers became weaker. Furthermore, the 1986 Superfund Amendments and Reauthorization Act (SARA) required cleanups at Superfund sites to employ permanent remedies whenever possible.¹⁸ With less financial resources, EPA has been less likely to choose permanent remedies that are inherently thorough and complete, but more costly.

The Trump Administration and Superfund

According to Trump’s rhetoric, Superfund has returned to the foreground of EPA’s focus under his administration. In Trump’s speech about his environmental program on July 8th, 2019, he mentioned how, “we’ve refocused the EPA back on its core mission, and, last year, the agency completed more Superfund hazardous waste clean-ups than any year of the previous administrations and set records in almost every year. We have done tremendous work on Superfunds.”¹⁹

In this report, we evaluate the Trump administration’s work on the Superfund program and his efforts to return Superfund cleanups “to their rightful place at the center of EPA’s core mission”²⁰ in order to “protect the health of our citizens and the environment in which we all live.”²¹ We focus specifically on the work done by the EPA’s Superfund Task Force over the past two years.

In our study, we found that Trump’s EPA has revitalized the Superfund in many ways, engaging with more sites and utilizing CERCLA more efficiently than past administrations. EPA’s enforcement power has become stronger, as EPA has been threatening to sue polluters for triple damages if they

don't agree to fund cleanups. However, the Trump administration has focused its resources on the sites with clear responsible parties, while orphan sites, without clear responsible parties, are ignored. This situation is exacerbated by a significant decline in funding for the Superfund program under the Trump administration. This means that fewer orphan sites are being cleaned. Superfund's lack of funding means that the EPA has to focus on getting a sponsor (responsible party) to cleanup the site above all else, limiting their ability to dictate how effective a cleanup can be.

EPA's Superfund Task Force

In May 2017, the EPA Administrator at the time, Scott Pruitt, assembled a Task Force to provide recommendations on the future of Superfund that would "reinvigorate and prioritize the Superfund program in a most expeditious manner."²² The Task Force was led by Albert "Kell" Kelly, whom Pruitt hired as a senior advisor. The goals of this effort were:

1. Expediting cleanup and remediation;
2. Re-invigorating responsible party cleanup and reuse;
3. Encouraging private investment;
4. Promoting redevelopment and community revitalization; and
5. Engaging partners and stakeholders.

In July 2017, the EPA's Superfund Task Force released 42 detailed recommendations based on these five goals²³ and followed up with a progress report on these recommendations in July 2018.²⁴ EPA anticipated that all steps necessary to achieve these recommendations would be completed by July 2019.²⁵ Among the many strategies identified by the Task Force to achieve its goals included establishing a Top Ten "Administrator's Emphasis List" of sites determined to need immediate and intense attention. The Administrator's Emphasis List (AEL) initially included 21 sites, but later grew to 26 sites as shown in Table 1.²⁶ In a meeting with Superfund leadership, EPA stated that the selection of Superfund sites for the AEL was based solely on "site-specific opportunities."

The Task Force also identified 31 "redevelopment opportunity" sites as shown in Table 2, referred to as the Redevelopment Opportunity List (ROL). Three of these sites are also on the AEL.²⁷ This list is significant because it includes sites that the Task Force feels could be cleaned and then redeveloped for new uses. Under Superfund law, PRPs, if identifiable, are mandated to fund cleanups for Superfund sites. Sites without PRPs could potentially be unappealing to developers, because lengthy and costly remedial actions are required before redevelopment can occur.

Each of the sites on the ROL has a redevelopment factsheet, much like a real estate brochure and provides specific information on the site, setting, current uses, existing information, future reuse plans and opportunities, use restrictions, and remedial status.²⁸ Remediation activities vary from site to site and most sites have responsible parties working on them. By creating this list, EPA is sending a message to developers who have funding to accelerate the cleanup of targeted sites.^{29,30}

In March 2019, EPA announced it was deleting 18 Superfund sites completely and 4 sites partially from the National Priority List (NPL).³¹ One of these sites is listed on the ROL as well. Delisting sites from the NPL allows for redevelopment, because Superfund sites generally generate poor market value due to the stigma associated with the Superfund designation. Delisting sites typically benefits communities because it leads to employment opportunities and economic growth. Three out of four of the sites that were partially deleted from the NPL had developers either anticipating financial investment or had clearance for redevelopment, which they cannot receive if a site is listed as an active Superfund site.

At first glance, the pace at which EPA has announced these site delistings makes it seem as though the Trump administration's Superfund process is moving faster than the typical Superfund process in the past. However, this perceived change in pace is actually just EPA taking advantage of the work started by former administrations. Most of the cleanups the Trump administration is working on were started years, even decades ago, by other administrations. The current administration has only completed five-year reviews at these sites which resulted in delisting.

Methodology

This report focuses specifically on the work of EPA's Superfund Task over the past two years. We looked at sites targeted for cleanup by the Task Force—the Administrator's Emphasis List (Table 1) and the Redevelopment Opportunity List (Table 2) and looked at the specific progress the Task Force has made in the cleanup of these sites. We researched the demographics by zip code for these sites (Tables 3) including the population, percent white, percent black or African American, percent American Indian or Alaskan Native and percent Asian. We compared this data to EPA data analyzing the demographic makeup of Superfund sites as a whole to determine how the Superfund Task Force's sites compared. The data included in the appendices were collected as of July 2019.

For the purposes of our research, we define orphan sites in the same way EPA does on their website, which is any Superfund site that doesn't have a viable PRP to fund its cleanup. While according to the EPA, there is no official list of orphan sites, the term is still used on their official website summary of CERCLA: "EPA cleans up orphan sites when potentially responsible parties cannot be identified or located, or when they fail to act."³² With no official list of orphan sites, we pieced together EPA data in order to determine how many sites on the AEL and ROL are orphan sites. We used EPA data to individually research potential PRPs at each site and determine whether the PRPs were viable or not. If we could not identify a viable PRP for a specific site, we defined it as an orphan site.

We also relied our own field observations from working with communities in order to draw specific conclusions about strategies the Task Force is using to obtain responsible parties to pay for cleanups. Furthermore, we analyzed data from GAO's 2015 Report on the Superfund Budget as well as EPA's Budget in Briefs to draw conclusions about the overall financial stability of Superfund.

III. Key Findings and Conclusions

Key Findings

EPA's cleanup efforts at Superfund Sites targeted 54 sites including 26 from the Administrator's Emphasis List (AEL), 31 from the Redevelopment Opportunity List (3 of these are also on the AEL). 18 additional sites were fully deleted from the NPL and four were partially deleted from the NPL.

1. Trump's EPA has mostly cleaned Superfund sites with clear Potentially Responsible Parties (PRP).

The majority, 79.6%, of Superfund sites targeted for cleanup by the Trump administration have responsible parties to pay for the cleanup. At four sites, no clear determination could be made, and for two sites, there were potential funding sources that were not potentially responsible parties.

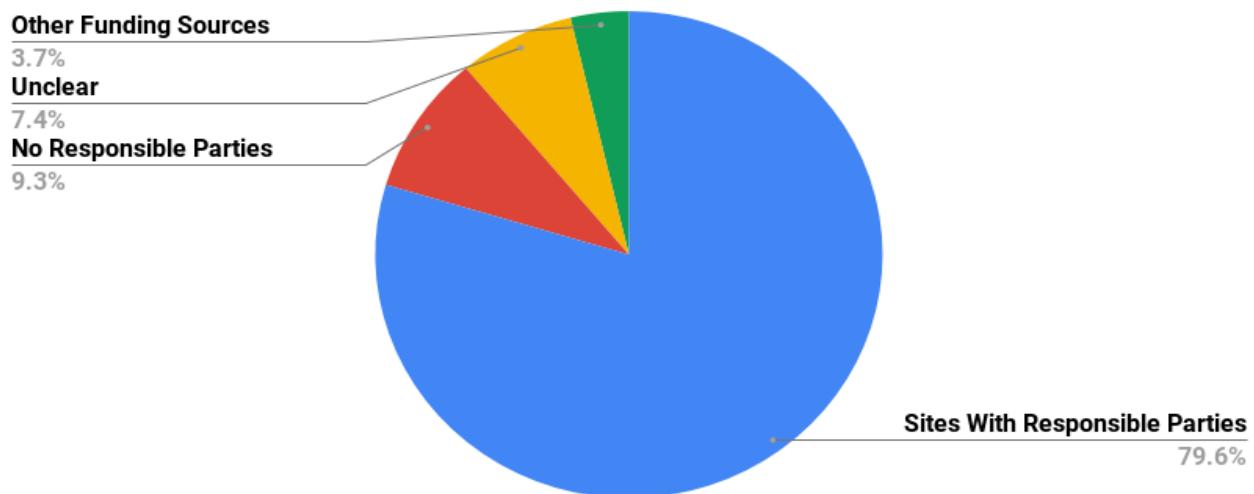

Figure 1. This chart shows Trump's Superfund sites, broken down by whether they have a responsible party (PRP) to pay for their cleanup or not. Orphan sites are shown in red, sites with PRPs in blue. Data for the "Actions and Status of Administrator's Emphasis List (AEL)" can be found in Table 1 of Appendix C.

2. Out of 54 Superfund sites targeted for cleanup by the Trump administration, only 5 were confirmed to be orphan sites. These sites have been cleaned as well.

Orphan sites seemed to be cleaned based on urgency, like from extreme weather events—in Pascagoula, MS, the EPA stepped in after heavy rains were threatening large scale contamination at a wastewater plant. The EPA was forced to maintain water treatment 24 hours a day, which ended up being incredibly costly.³³

3. In a striking departure from previous EPA administrations, Trump's EPA has worked aggressively to come to settlement agreements with responsible parties.

CHEJ was told by a senior EPA staff person that the administration has been threatening to sue for triple damages if a corporation won't comply: a clause allowed for in the Superfund law but rarely invoked by past EPAs.

- a. In April 2018, a settlement between EPA and Atlantic Richfield Company at the Anaconda Copper Mine in Yerington, NV, was reached in which the responsible party agreed to reimburse EPA for past response costs at the site.³⁴
- b. In July 2018, another settlement was reached between the same responsible party and EPA at the Anaconda Smelter Superfund site in Montana, addressing final cleanup actions.³⁵
- c. San Jacinto River Waste Pits site in Houston, TX was highly contaminated with dioxin waste, yet no action was initiated by EPA for years. Not until April 2018, when EPA reached an agreement with International Paper Co. and McGinnes Industrial Maintenance Corp., were they able to move forward with the cleanup process.

4. The responsible parties on the AEL and ROL were either contributors of waste onsite or private developers willing to invest in the site who purchased the property and is financing the cleanup.

- a. **Example:** Mohawk Tannery site in Nashua, NH. The site became inactive in 1984 and was proposed to the NPL in 2000. Between then and 2009, time critical removals, engineering evaluations, cost analyses, a remedial investigation and pilot testing was conducted. The latest actions took place in 2012 when the tannery building was demolished, and in late 2013 when a human health and ecological risk assessment was completed. The site was listed on the AEL in 2017 partly because of a local investor's proposal for redevelopment using private funds.^{36,37}

5. EPA's focus on sites with responsible parties who were contributors of on-site waste shows that agreements to cleanup Superfund sites can be reached.

However, there are concerns that achieving these agreements may come with a preference for cost and time efficiency over comprehensive protection of human health. Most communities are satisfied with the Task Force because they are finally getting action after decades of stagnation, but there remain many questions about the action being taken.

- a. **Example:** USS Lead Superfund Site. EPA activities have been accelerated due to its listing on the Administrator's Emphasis List. In fall 2018, EPA proposed their preferred cleanup plan for zone 1 which impacts the West Calumet Housing Complex.³⁸ This cleanup included removal and replacement of two feet of soil. The East Chicago Calumet Coalition Community Advisory Group strongly opposed this plan, arguing that it's not protective enough as it might pose future health risks if the site is developed for residential use.³⁹

- b. **Example:** Minden, West Virginia recently was added to the NPL after a 30 year battle against PCB pollution. The community was very excited that the current administration was moving forward with their cleanup process after being ignored by other administrations for decades. However, just because Minden was added to the NPL doesn't necessarily mean that the people will get a thorough, permanent clean up: the site is currently an orphan site.

6. In FY 2018, 18 Superfund sites were deleted completely and 4 partially from the NPL. These sites had been in line to be removed for a long time.

7. Superfund is now funded entirely out of Congressional budget appropriations, meaning that taxpayers are footing the bill for cleanups rather than polluters.

Section III

8. According to a 2015 GAO Report, Superfund budget appropriations have decreased overall from 1999 to 2013.⁴⁰

Our research reflects that this trend has continued overall, with FY2018 marking the lowest dip in Superfund budget appropriations since 1986, with an operating budget of \$781 million (price has been adjusted to 2019 dollars).

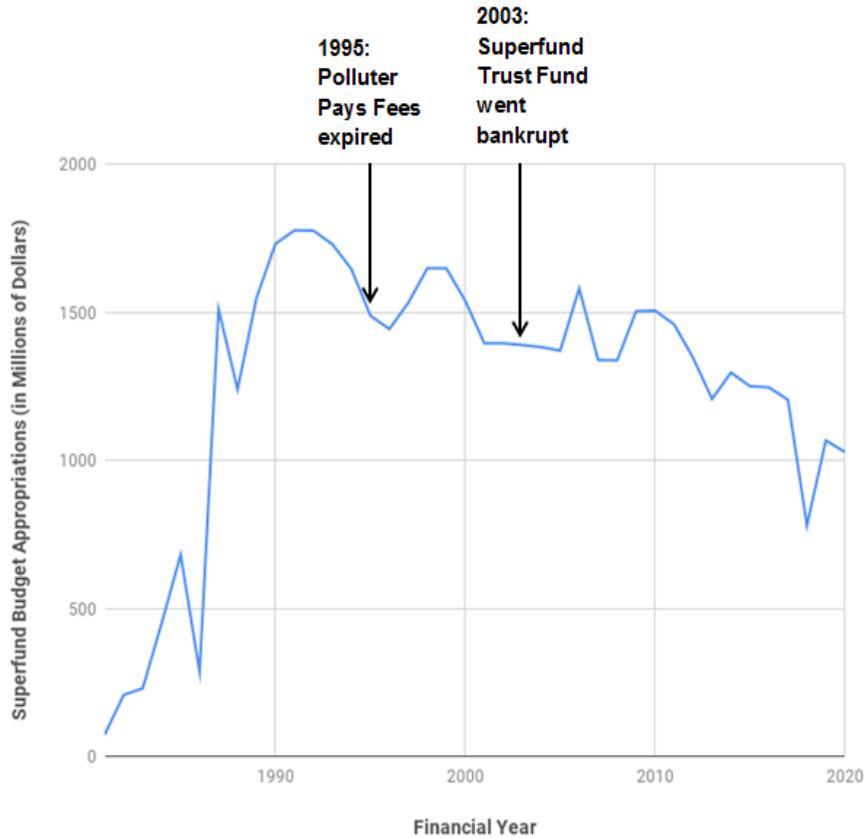

Figure 2. This graph shows EPA's Superfund Budget Appropriations over time.^{41,42} The Polluter Pays Fees expired in 1995 and the Superfund Trust Fund went bankrupt in 2003. All numbers have been adjusted to 2019 dollars.

9. During Trump's EPA, Superfund has become a bigger percentage of the EPA budget appropriations than during the Obama administration.

For Trump's first three years, Superfund comprised of an average of 15.9% of EPA budget appropriations, while during the Obama administration, Superfund was an average of 13.7% of EPA budget appropriations.⁴³

10. Even though Superfund received a larger percentage of budget appropriations under Trump's EPA, overall, Trump's EPA has given Superfund less money.

During the first three years of Obama's presidency, Superfund received \$4,470 million dollars, while during the first three years of Trump's presidency, Superfund received \$2,878 million dollars (values have been adjusted to 2019 dollars).^{44,45,46}

11. 61.1% of the sites targeted by the Trump Administration were in majority white areas.

Section III

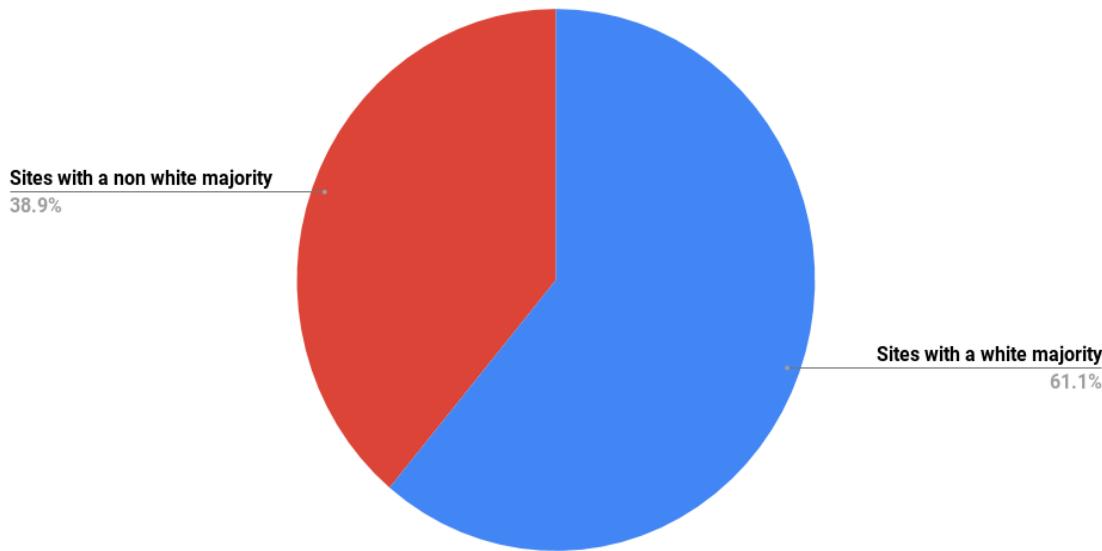

Figure 3. Trump's Superfund sites in a zip code with a white majority vs. Trump's Superfund sites in a zip code with a non white majority.⁴⁷ Sites with a non white majority are shown in red, sites with a white majority in blue. Data used to generate this graph can be found in Table 3 of Appendix C.

12. 40.7% of the population living in the same zip code as one of Trump's Superfund sites are minorities (defined as anyone who doesn't identify as white only),⁴⁸ whereas 49.7% of the total population that live within 3 miles of a Superfund site is composed of minorities.⁴⁹

Analysis

In many ways, the Trump administration is taking a significantly different approach to Superfund than what we've seen under other administrations. For one, he's targeted and completed action on a large number of sites, and placed Superfund at the center of the EPA's mission by creating the Superfund Task Force. He's also using CERCLA in its full power to get corporations to move on cleanups, like threatening to sue for triple damages if corporations won't comply. By either settlement agreements with local developers or extensively going after responsible parties, EPA has successfully changed the status at many sites from static to ongoing. This has been especially helpful for sites where there has been no action and no cleanup for years, and this will lead to development and revitalization for these communities.

However, Trump's Superfund remediation approach also follows very specific patterns. The majority of the sites he's targeted are sites with a clear Potential Responsible Party, which includes companies that were largely on-site contributors of waste or private developers willing to invest in the site. Overall, he's largely ignored orphan sites. Orphan sites are in many ways the most vulnerable of Superfund sites, because without federal allocations to the Superfund program, there is no money to clean up these sites. These findings convey a focus on sites that have a clear cleanup plan lined up, and a departure from the innate purpose of Superfund, which is to clean up the most toxic hazardous sites, not just the ones that have an easy source of funding to pay for the cleanup.

This is further evidenced by the fact that the majority of the sites deleted from the NPL by Trump had already been in line for removal for a long time. By removing these sites, Trump is capitalizing on the work began by other administrations. This means that the EPA's success during the Trump administration thus far is mostly due to an ability to find responsible parties who were willing to foot the bill.

Without this funding, little cleanup will occur at Superfund sites, and since the current administration has not reinstated Polluter Pays Fees, it is unlikely that more cleanups will occur in the future. While it's still important that action be taken on these sites, it does follow the pattern that the majority of Superfund work completed by Trump is work that already had a clear plan lined up. The main takeaway from this should be that while Trump's EPA has been instrumental in moving the Superfund cleanup process forward for many sites, his strategy has been to target the Superfund sites with the simplest solutions, not necessarily the ones facing the worst contamination.

What's perhaps even more striking is that the large majority of sites targeted by the Trump administration are in predominantly white areas. 61.1% of Superfund sites Trump is working on are in zip codes where the population is mostly white. This is particularly significant because environmental pollution disproportionately affects people of color. A recent study, financed in part by the EPA, found that people of color disproportionately live near polluted facilities and breathe in polluted air, and thus suffer disproportionately from diseases caused by living in an unhealthy environment. According to EPA's own data, 1/5 of all minorities in the US live within 3 miles of a Superfund site.⁵⁰ The population within 1 mile of all Superfund sites in the US is composed 49.3% of minorities, and within 3 miles the population is 49.7% minority (if minority is defined as anyone who is not white, excluding white people who also identify as Hispanic or Latino).⁵¹ When looking at zip codes Trump's Superfund sites are located in, the population is 41.7% minority, which is **significantly less** than the overall population makeup of who lives near Superfund sites. It's important to keep in mind that analyzing zip codes vs. analyzing population within one to three miles is a different measurement, because zip codes can vary in size, but knowing that Superfund sites disproportionately affect people of color, it's significant that Trump's Superfund policy is mostly serving white people.

The most ironic part of the Trump administration's EPA is that even though acting on Superfund may have taken a more central role, its budget has continued to decrease significantly under the Trump administration. Superfund's budget reached its lowest since 1986 in FY2018, and while it increased in FY2019, it is still significantly lower than it was in past administrations. In Obama's first three years of presidency, Superfund received \$4,470 million dollars, but in Trump's first three years Superfund has received only \$2,878 million. Even though Superfund may be taking more of a central role under the Trump administration, the numbers show that this central role isn't necessarily making the Superfund program stronger, because overall budget cuts to environmental programs have seriously crippled Superfund. As funding for EPA decreases, Superfund's budget decreases as well: no matter how many sites are deleted from the NPL or how many sites are focused on, it's impossible for the Superfund program to be as effective without funding. This is especially true for orphan sites, because without the Superfund budget appropriations, there's no guaranteed source of money to finance a cleanup.

Without a stable and equitable source of funding, these sites and many others will continue to be ignored. Especially since the Polluter Pays Fees are no longer being implemented, Superfund budget appropriations are more important than ever. For orphan sites to receive cleanup, the funding must come directly out of the Superfund budget itself, which has been rapidly shrinking since the fees stopped being collected.

Conclusion: The Future of Superfund Depends on the Reinstatement of Polluter Pays Fees

A full evaluation of Trump's work on Superfund is complex. On one hand, the revitalizations made to the Superfund program under the Trump administration have been essential to the overall success of the program and for people affected by hazardous waste sites. On the other hand, there is significant evidence that the most vulnerable Superfund sites are being ignored under the Trump administration. The sites focused on are primarily those that have Potential Responsible Parties in place to finance the cleanup, which is necessary for the program as Trump has continued cutting funding for the Superfund program. Trump has largely focused on sites in white areas, despite the fact that Superfund primarily affects people of color: the reasons for this focus are unclear, but it is clear that continued environmental injustice puts people of color more at risk from toxic and hazardous waste sites.

While Trump has claimed that Superfund has returned to its rightful place at the center of EPA's mission during his presidency, his administration is also responsible for the lowest Superfund budget in more than 30 years. This report shows that reinstating the Polluter Pays Fee is absolutely essential if we hope to combat environmental injustice and hazardous waste pollution at Superfund sites. Decreased funding and the slowdown of the cleanup of Superfund sites have resulted in increased toxic exposures and health threats to communities across America. The most at risk sites are still being ignored. These are primarily orphan sites and those dominated by people of color, meaning people are still suffering from the impacts of hazardous waste pollution. Funding for Superfund is still decreasing, and the program is not able to function and succeed to its full potential.

Stable and equitable funding is long overdue for this critically important pollution remediation program. Superfund was founded on the principle that companies responsible in part for creating toxic waste sites and generating hazardous waste should bear the financial burden of cleaning them up. Currently, the burden of cleaning up toxic waste falls unfairly on the American taxpayer. Without industry fees to replenish Superfund, there is simply not enough money to do the critical job of cleaning up hundreds of abandoned toxic waste sites.

Appendix A. How Superfund Works

What is Superfund and How Does it Work?

Administered by the federal Environmental Protection Agency (EPA) in cooperation with state and tribal governments, Superfund provides broad authority for the government to respond to chemical emergencies and to clean up the worst contaminated sites in the country. Superfund was created because toxic dumps were causing human health risks, massive fish kills, wildlife destruction, air pollution, and drinking water contamination.⁵²

Congress passed the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), also known as the “Superfund” law, in December 1980. This law directed EPA to respond to any release of toxic or hazardous substances that posed an imminent and substantial danger to public health. EPA can complete emergency removal actions to more quickly contain or remove toxic wastes at a site or conduct comprehensive removal actions to fully clean up a site. The worst of these sites are listed on the National Priority List (NPL), marking them as high priority contaminated sites that pose an imminent risk to human health. NPL sites undergo investigations and cleanups, funded either by the polluter or the Trust Fund.

EPA’s Office of Solid Waste and Emergency Response oversees management of the program. The agency created three mechanisms to establish cleanup standards and procedures. The National Contingency Plan (NCP) provides procedures for EPA, the states, and polluting companies when conducting emergency removals and site cleanups. The Hazard Ranking System (HRS) is a numerically based screening system that evaluates and scores the environmental and health hazards of each site. In order to be listed on the NPL, a contaminated site must have an HRS score of 28.5 or above.⁵³ Additional factors that could affect a site’s listing include a health advisory issued by the Agency for Toxic Substances and Disease Registry (ATSDR) and nomination by the state government. Since 2000, all sites added to the NPL have had state support.

To pay for these cleanups, the Superfund law created a Trust Fund of approximately \$1.6 billion to be used when a polluter responsible for the contamination at a site cannot be identified, is bankrupt, or refuses to take action. The Superfund Trust Fund was financed by four fees and court awards from polluters responsible for hazardous releases, collectively referred to as the Polluter Pays Fees.⁵⁴ The financing enabled EPA to prevent future toxic disasters by quickly responding to toxic releases and then recovering expenses from the polluter. Under U.S. common law, polluter liability must be determined before any action can be taken. The advantage of Superfund is that it provides EPA with the money to address a health-threatening toxic site first and gives EPA the authority to sue the responsible party for up to triple damages to recover its costs.

Superfund was created on the principle that companies most closely associated with generating hazardous waste and creating toxic waste sites should bear the financial burden of cleaning them up. The Superfund Trust Fund has been used to clean up 30 percent of the sites, as well as fund enforcement, oversight and other EPA program activities. Approximately 70 percent of Superfund sites are cleaned up by the companies responsible for the pollution.⁵⁵

EPA has three basic options to achieve a Superfund site cleanup: 1) conduct the cleanup itself and then seek to recover costs from the polluter(s); 2) use judicial or administrative proceedings to compel the polluter to fund the cleanup; and 3) reach a settlement agreement with the polluter that requires them to pay for the cleanup.

In 1986, Congress amended the Superfund program by approving the Superfund Amendments and Reauthorization Act (SARA) that strengthened the CERCLA law and increased the Trust Fund to \$8.5 billion. SARA prioritized the goal of permanent cleanup for Superfund sites, expanded agency investigations into toxic exposure-related human health problems, and provided technical assistance grants to encourage greater citizen participation in the site decision-making process.⁵⁶

States often nominate sites for inclusion on the NPL. However, fearing the stigma of NPL sites, some states, corporations, and even local governments oppose NPL listings when their sites meet the NPL criteria. After 2002, EPA began allowing responsible parties to sign agreements to fund and oversee Superfund cleanups in exchange for agreeing not to list the site on the NPL. This is called the Superfund Alternative Approach (SAA). In order to qualify for an SAA agreement, a site must: 1) meet the criteria for an NPL listing, 2) require long-term remedial action, and 3) have a responsible party that is willing to complete the remedial work.⁵⁷ However, concern about limited community involvement and lack of sufficient EPA oversight has made SAA agreements a controversial issue.

Appendix B. Congress's Role

The Role of Congress in Superfund

Bi-Partisan Presidential Support

With the exception of President George W. Bush, the Superfund Polluter Pays Fees have benefited from broad bipartisan presidential support. President Jimmy Carter, a Democrat, signed the original law in 1980 and President Ronald Reagan, a Republican, signed the 1986 law to continue collecting the fees. In 1990, President George H.W. Bush, a Republican, signed legislation renewing the fees,⁵⁸ and in 1995 Democratic President Bill Clinton's Administration proposed renewing the Superfund fees, but Congress failed to approve it. The Bush Administration was the first and only administration with President George W. Bush, a Republican, to consistently oppose reinstatement of the Polluter Pays Fees. By 2003, the Trust Fund was bankrupt, forcing the American taxpayers to pay the entire cost of running the Superfund program.

Unlike his predecessor, President Barack Obama and his administration repeatedly supported the reinstatement of the Polluter Pays Fees, but intense opposition from Congress has prevented reinstatement of the fees. Early on, President Obama said he would "...restore the strength of the Superfund program by requiring polluters to pay for the cleanup of contaminated sites they created."⁵⁹⁻⁶¹ During his two administrations Obama attempted to keep that promise. His budgets, while sometimes decreasing total EPA funding, consistently allotted between \$1.1 and \$1.3 billion to Superfund and recommended reinstatement of the Polluter Pays Fees.⁶²

Congressional Efforts to Reauthorize Superfund Fees

Although consistent funding through Polluter Pays Fees is necessary to protect the financial future of the Superfund program, the fees have not been collected since 1995. Numerous bills have been introduced since that time to refinance Superfund, but an obstructionist Congress has consistently fought reauthorization of the fees and none have passed. Congressional representatives including Frank Pallone, Jr. (D-NJ), Maurice Hinchey (D-NY), Senator Barbara Boxer (D-CA) and former senators Lincoln Chafee (R-RI) and Frank Lautenberg (D-NJ) as well as Hillary Clinton (D-NY) all sponsored bills to reinstate Superfund's Polluter Pays Fees.^{63,64} However, none of these attempts to shift cleanup expenses back to polluting industries were passed.

The Congressional Sessions during Obama's presidency (111th to 114th) continued to reject any attempt to finance Superfund through these fees. Two failed attempts during this time, in the House of Representatives and in the Senate, demonstrate the continuous lack of Congressional support for this crucial program. On July 29, 2014, Corey Booker (D-NJ) introduced in the Senate the "Superfund Polluter Pays Restoration Act of 2014" (S. 2679) supported by Senator Robert Menendez (D-NJ) and Senator Barbara Boxer (D-CA).⁶⁵ This bill would have reinstated the Polluter Pays Fees, increasing them slightly to adjust for inflation. However, it was referred to the Committee on Finance where it died. Senator Booker reintroduced this bill again in 2017, but with the same result.

Representative Earl Blumenauer (D-OR) introduced in the House the "Superfund Reinvestment Act" (H.R. 1596) cosponsored by former Representative Timothy Bishop (D-NY) and Representative Frank Pallone (D-NJ) on April 15, 2011.⁶⁶ This bill proposed reinstating the Polluter Pays Fees and ensuring that Superfund allotments are used only to finance Superfund cleanup. After referrals to four separate

committees and two subcommittees, this bill died. Representative Blumenauer reintroduced this bill on June 15, 2015, garnering 18 co-sponsors in the process. This bill also failed to pass. On July 26, 2019, Representative Blumenauer proposed the “Superfund Reinvestment Act” (H.R. 4088) cosponsored by Congressional representatives Gerald Connolly (D-VA), Jerry McNerney (D-CA), Terri Sewell (D-AL), Eleanor Holmes Norton (D-DC), Raul Grijalva (D-AZ), and Matt Cartwright (D-PA). The bill is currently still in the process of being reviewed by committee before it can be voted on in the House and Senate.⁶⁷

A 2011 analysis of Superfund funding under the American Recovery and Reinvestment Act (enacted by President Obama in response to the 2009 economic crisis) found that the additional \$600 million allotted to Superfund allowed EPA to begin cleanups at 25 new sites and expand cleanups at 26 sites.⁶⁸ The author concluded that this increase in Superfund actions demonstrates that adequate funding can fundamentally improve the program. Therefore, Congress’s refusal to reinstate the polluter pays fees is clearly directly impeding EPA’s ability to successfully complete Superfund cleanups.

Superfund Today

In an attempt to “prioritize the Superfund program”, former EPA Administrator Scott Pruitt issued a memorandum on May 22, 2017. This called for three main actions: (1) The establishment of the Superfund Task Force, which was created to provide recommendations for the future on how to improve the efficiency of the Superfund program; (2) To promote accountability and consistency within the program; and (3) To increase communication between regional administrators and their staff with regards to determining alternatives and solutions, especially with high cost sites.⁶⁹ Although the task force brought more attention to the Superfund program, it has yet to yield any significant improvements to the program.

Along with representatives from various affected communities, CHEJ has been participating in quarterly meetings with the EPA’s Superfund staff. These meetings provide an opportunity for the communities to be heard and addressed by EPA, and in many cases to receive the help that they need. We plan to continue these meetings in order to give more of these communities a chance to advocate for themselves, and hopefully push the EPA to increase their Superfund efforts and give these communities the remedial aid they deserve.

Appendix D. National Priorities List (NPL)

Table 4. National Priorities List (NPL) Sites by State

Site Name	City	Site EPA ID	Site Score	Link to Site Location and Profile
Alabama (12 Sites)				
Alabama Army Ammunition Plant	Childersburg	AL6210020008	36.83	Site Location
Alabama Plating Company, Inc.	Vincent	ALD004022448	30.2	Site Location
American Brass, Inc.	Headland	ALD981868466	55.61	Site Location
Anniston Army Depot (Southeast Industrial Area)	Anniston	AL3210020027	51.91	Site Location
Ciba-Geigy Corp. (McIntosh Plant)	McIntosh	ALD001221902	53.42	Site Location
Interstate Lead Co. (ILCO)	Leeds	ALD041906173	42.86	Site Location
Olin Corp. (McIntosh Plant)	McIntosh	ALD008188708	39.71	Site Location
Redstone Arsenal (USARMY/NASA)	Huntsville	AL7210020742	50	Site Location
Stauffer Chemical Co. (Cold Creek Plant)	Bucks	ALD095688875	46.77	Site Location
Stauffer Chemical Co. (LeMoyne Plant)	Axis	ALD008161176	32.34	Site Location
T.H. Agriculture & Nutrition Co. (Montgomery Plant)	Montgomery	ALD007454085	44.46	Site Location
Triana/Tennessee River	Limestone, Morgan	ALD983166299	61.42	Site Location
Alaska (6 Sites)				
Adak Naval Air Station	Adak	AK4170024323	51.37	Site Location
Eielson Air Force Base	Fairbanks North Star Borough	AK1570028646	48.14	Site Location
Elmendorf Air Force Base	Greater Anchorage Borough	AK8570028649	45.91	Site Location
Fort Richardson (USARMY)	Anchorage	AK6214522157	50	Site Location
Fort Wainwright	Fairbanks North Star Borough	AK6210022426	42.4	Site Location
Salt Chuck Mine	Thorne Bay	AK0001897602	50	Site Location
Arizona (9 Sites)				

Table 4. (Continued)

Site Name	City	Site EPA ID	Site Score	Link to Site Location and Profile
Apache Powder Co.	St. David	AZD008399263	39.09	Site Location
Hassayampa Landfill	Hassayampa	AZD980735666	42.79	Site Location
Indian Bend Wash Area	Scottsdale	AZD980695969	42.24	Site Location
Iron King Mine - Humboldt Smelter	Dewey-Humboldt	AZ0000309013	52.69	Site Location
Motorola, Inc. (52nd Street Plant)	Phoenix	AZD009004177	40.83	Site Location
Phoenix-Goodyear Airport Area	Avondale, Good-year	AZD980695902	45.91	Site Location
Tucson International Airport Area	Tucson	AZD980737530	57.8	Site Location
Williams Air Force Base	Chandler	AZ7570028582	37.93	Site Location
Yuma Marine Corps Air Station	Yuma	AZ0971590062	32.24	Site Location
Arkansas (9 Sites)				
Arkwood, Inc.	Omaha	ARD084930148	28.95	Site Location
Cedar Chemical Corporation	West Helena	ARD990660649	0	Site Location
MacMillan Ring Free Oil	Norphlet	ARD008049207	50	Site Location
