

Back-to-School Guide to PVC-Free School Supplies

Keep the poison plastic off your back-to-school shopping list!

The Center for Health, Environment & Justice (CHEJ) has created this seventh-annual **Back-to-School Guide to PVC-Free School Supplies** to empower you to make smarter, healthier shopping choices for a toxic-free future. This guide lists the most common back-to-school supplies made out of polyvinyl chloride (PVC or vinyl) plastic and suggests safer PVC-free alternatives for your children.

Why Shop for **PVC-Free** School Supplies?

Very important
will be on the test!!!

Healthy schools free from toxic chemicals are critical to a child's health and well-being. Most of the time spent during the years that children's bodies and minds are developing is spent inside school buildings. These chemicals have irreversible, long-term effects that can impact your child for the rest of their life.

Many school supplies such as lunchboxes, backpacks, and binders are often made from vinyl—an unnecessary toxic plastic that is dangerous to children's health and the environment throughout its lifecycle: from production, to use, to disposal.

PVC/Vinyl is unique among most plastics because it contains dangerous chemical additives such as phthalates, lead, cadmium, and/or organotins, which can be toxic to your child's health. Laboratory tests commissioned by CHEJ and the Empire State Consumer Project in 2012 uncovered high levels of phthalates in common back to school products including backpacks, lunchboxes, and 3-ring binders. These phthalates can leach out or evaporate into the air over time, posing unnecessary dangers to

children. Over 90% of all phthalates are used to soften vinyl products. These chemicals have been linked to asthma, learning disabilities, diabetes, and other chronic health problems on the rise. Congress has banned phthalates in children's toys, yet they are widespread in these and other PVC back to school products. **Children are at risk from even low-level exposure to these toxic chemicals. In order to protect your child, it's important to purchase PVC-free school supplies whenever possible.**

Cancer causing chemicals like vinyl chloride and dioxin contaminate the air from the very beginning of the PVC lifecycle. When PVC is manufactured or burned, numerous dioxins are formed and released. Dioxins are a highly toxic group of chemicals that can cause cancer, and harm the immune and reproductive systems. These, and other toxic chemicals released during the PVC lifecycle, contaminate our children's bodies and may pose irreversible life-long health threats.

Mentoring a Movement,
Empowering People,
Preventing Harm

Did you know toxic phthalates may be in your children's back-to-school supplies? Testing commissioned by CHEJ in 2012 uncovered high levels of phthalates in common school supplies including backpacks, lunchboxes, and 3-ring binders. The levels of phthalates found in children's school supplies would be illegal if these products were toys.

How to Identify PVC, the Poison Plastic

The key to avoiding PVC products is recognizing them and knowing how to find safer alternatives.

- PVC products are often labeled with the words “vinyl” on the packaging, such as vinyl 3-ring binders
- To identify PVC packaging, first look for the universal recycling symbol. If it has the number “3” inside it, or the letters “V” or “PVC” underneath it, you know the product is made out of PVC. *Just remember – bad news comes in #3’s, don’t buy PVC*
- Some products are not properly labeled, making it tough to determine whether they contain PVC. If you’re uncertain, e-mail or call the 1-800 number of the manufacturer or retailer and ask what type of plastic their product is made of. You have a right to know.

Where Does Your Child's PVC Backpack and Lunchbox Come From?

Mossville, Louisiana is a small African-American community which is the vinyl manufacturing capital of America. This area is home to more PVC chemical plants than any other in the country. Communities like Mossville, LA, are where the chemicals used to make PVC lunchboxes, backpacks, and other school supplies are created – exposing the community and workers to highly toxic chemicals.

In 2010, CNN's Dr. Sanjay Gupta aired an hour-long special investigating the pollution problems in Mossville. A US EPA study in 1999 found levels of the cancer-causing chemical vinyl chloride (one of the key chemicals used to make PVC) in the air at greater than 100 times the state air quality standard. As a result of exposure to pollution, residents suffer

from elevated rates of disease. The federal government has found alarming results—community members had more than three times the national average of dioxins in their blood, elevated dioxins in breast milk, and high cancer mortality rates. A university study found residents were two to three times more likely to suffer from health problems, including a high incidence of ear, nose and throat illnesses, central nervous system disturbances, and cardiovascular problems, as well as increased skin, digestive, immune and endocrine disorders.

Next time you pick up that PVC binder or PVC school supply, think about communities such as Mossville, Louisiana where these products are created.

“School supplies are supposed to help our children with their education, they shouldn’t be harming their health. We don’t allow high levels of these toxic chemicals in children’s toys and we certainly shouldn’t allow them in back-to-school products. When kids take their lunch to school this fall, they shouldn’t be carrying it in a lunchbox laden with anything other than a nutritious meal.”

—Senator Charles Schumer (D-NY)

Quick Tips for Avoiding PVC School Supplies

Here are some quick tips for avoiding PVC in common back-to-school products. They will help you embark down the road towards using safer PVC-free school supplies. See the *PVC-Free Products and Suppliers* section for a more detailed listing of companies that manufacture or sell PVC-free school supplies.

PVC isn’t the only plastic that poses a threat to your children’s health; also avoid polycarbonate (PC), polystyrene (PS) and acrylonitrile butadiene styrene

(ABS) plastics (see the *Other Toxic Plastics to Avoid* section on page 20). **To be safe, choose non-plastic products whenever possible.**

When choosing plastic items, be sure to not only avoid PVC but also avoid the three-arrow “recycling” symbol with the number 3 and/or the initials PVC; indicating it’s made with PVC. If no symbol is present, call the manufacturer’s question/comment line (usually a toll-free 800 number) listed on the package to find out what it’s made of.

Art Supplies

- Avoid PVC in smocks by looking for fabric ones.
- Avoid modeling clays made of PVC (polymer clays such as Fimo and Sculpey). Polymer clays are often loaded with phthalates, which are harmful to children's health. Look for clays made without PVC and phthalates, or make your own (recipes are available online such as at <http://www.theholidayzone.com/recipes/dough.html>).

Backpacks

- Avoid backpacks with shiny plastic designs as they often contain PVC and may contain phthalates or lead.
- Avoid backpacks with a warning that says something such as, "WARNING: This product contains chemicals known to the State of California to cause cancer, and birth defects or other reproductive harm." This means the product likely contains lead.

Clothing and Accessories

- Look for PVC-free materials in rainwear (i.e. rain boots and raincoats), prints on clothing, and accessories such as handbags, jewelry and belts.
- Studies have found vinyl raincoats are often loaded with toxic phthalates.
- In purchasing accessories like purses and jewelry, look for fabrics and other materials rather than plastics. Choices include jacquards, velvets, crinkled crepes, satins, wood, metals, pearls, rhinestones, etc.

Electronics

- Avoid electronics manufacturers who have not committed to phasing out PVC and other toxic chemicals in their production. For a list of companies that are going PVC-free, consult the latest edition of Greenpeace's Greener Electronics Guide that can be found at <http://www.greenpeace.org/international/en/campaigns/toxics/electronics/>
- Buy electronics from companies who have pledged to responsibly "take it back" at the end of its useful life.
- To learn how to responsibly recycle electronics, visit <http://www.electronicstakeback.com/how-to-recycle-electronics/>

Food Wrap

- Studies have found chemicals can leach from PVC food wrap into food. Use PVC-free butcher paper, waxed paper, parchment paper, low density polyethylene (LDPE) or cellulose bags.
- Ask the manager of your grocery store to stock PVC-free food wrap for meats and cheeses in the deli.

Lunchboxes

- Avoid lunchboxes with a warning that says something such as, "WARNING: This product contains chemicals known to the State of California to cause cancer, and birth defects or other reproductive harm." This means the product likely contains lead.
- Even without the warning, many vinyl lunchboxes contain phthalates, and should be avoided.
- Use cloth lunch bags instead. Many lunch boxes are made of PVC, or coated with PVC on the inside.
- Look for lunchboxes labeled as "PVC-free."

Notebooks

- Avoid notebooks containing metal spirals encased in colored plastic. The colored plastic coating on the metal spirals usually contains PVC. Select notebooks with uncovered metal spirals to avoid PVC.
- Avoid notebooks with plastic coating, as this may contain PVC.

Organizers and address books

- Choose organizers/ address books made with sustainably harvested wood, metal, or paper covers. Avoid those made of plastic – these sometimes contain PVC.

Packaging of School Supplies

- Avoid single-use disposable packaging whenever possible.
- Avoid the three-arrow "recycling" symbol with the number 3 and/or the initials PVC; indicating it's made with PVC. If no symbol is present, call the manufacturer's question/comment line (usually a toll-free 800 number) listed on the package to find out what it's made of.
- Avoid products packaged in unlabeled plastics, such as clamshells and blister packs (those ones that are clear and usually difficult to open), which may contain PVC.

DID YOU KNOW?
Toxic chemicals released by the PVC lifecycle have been found in the bodies of babies, children and adults. In fact phthalate levels are highest in children ages 6 to 11 and women..

- Choose products with packaging made from more easily recycled materials like paper (look for those with higher post-consumer recycled content), paperboard, and glass.

Paperclips

- Stick to the plain metal paperclips. Colored paper clips are often coated with PVC.

Raincoats and Rainboots

- Be sure to avoid those advertised as “vinyl.”

Three-Ring Binders

- Use cardboard, fabric-covered, or polypropylene binders. Most 3-ring binders are made of PVC and may contain phthalates.
- Look for binders labeled as “PVC-free.”

Umbrellas

- Avoid shiny and colorful plastic umbrellas as these are typically made out of PVC and likely

contain phthalates. Look for those made out of other materials such as nylon.

Utensils and Dishware

- Use stainless steel utensils. If you require disposable dinnerware, look for bio-based (made with PLA or PHA plastics) cutlery and plates.
- Use glass or stainless steel drinking containers. If you require plastic, avoid PVC, polystyrene (PS) and polycarbonate (PC) plastics.
- Never microwave with plastics as that will increase the chances of toxic additives migrating into your food.** Use glass, stoneware, or ceramic dishware and containers instead. Heating plastic increases the chances of chemical additives such as bisphenol A, phthalates or other additives leaching into food and beverages.

PVC-Free School Supplies Products and Suppliers

To help you find PVC-free school supplies, we've compiled this spreadsheet of companies that offer PVC-free products and where to find them.

This list is a starting point - it is not intended to list every single PVC-free product or manufacturer. Use it as a guide to build your own PVC-free shopping list. It will help you find safer PVC-free school supplies.

A number of these companies also sell school supplies made out of PVC, so be sure to pay attention to the specific PVC-free product names listed herein.

This guide was released in August 2013 and changes to the products listed may have occurred since publication.

Category	School Supply	Retailer or Manufacturer	PVC-Free Products and Alternative Materials	More Information
Academic Supplies	Binder Pockets	Avery	Avery Binder Pockets. Labeled PVC-free. Come in various colors. Fits smaller 3-ring binders and organizers: 5.5" x 8.5". 5 pack	www.avery.com , also Available at Wal-Mart, Kmart, Staples, Office Depot, and Office Max

 CHEJ does not endorse any of these products, manufacturers or retailers, nor provide any warranty of the appropriateness of listed products.

DID YOU KNOW?

Toxic chemicals released by the PVC lifecycle have been linked to chronic diseases that are on the rise such as asthma, obesity, cancer and learning and developmental disabilities.

Other Toxic Plastics to Avoid

Plastic	Why It's Bad	Where Found / How to Identify
Acrylonitrile butadiene styrene (ABS)	This plastic is manufactured with styrene, a chemical that can damage the nervous system and is listed as a possible human carcinogen by the International Agency for Research on Cancer. Other key chemicals used in its manufacture include acrylonitrile and butadiene, which are both listed as possible human carcinogens.	This plastic was not part of the original plastics ID system, so it lacks a number. It is often used in piping, musical instruments, automotive parts, wheel covers, and toys.
Polycarbonate (PC)	Polycarbonate plastic is manufactured with a synthetic sex hormone, bisphenol A (BPA). In 2008, the National Toxicology Program (NTP) raised concerns that exposure to BPA during pregnancy and childhood could impact the developing breast and prostate and affect brain development and behavior in American children. Numerous states and governments around the world have banned BPA in baby bottles and other products.	Often (though not always) marked with a "7" (which indicates "other" types of plastic) with the letters "PC" underneath the recycling symbol. Polycarbonate is a hard, durable plastic typically used to make reusable water bottles, in food can linings, thermal receipt paper and more.
Polystyrene (PS)	Polystyrene is manufactured with styrene, a chemical that can damage the nervous system and is listed as reasonably anticipated to be human carcinogens by the U.S. Department of Health and Human Services. Toxic chemicals leach out of polystyrene into food when heated. Manufacture also contributes to ozone formation.	This plastic is often marked with a "6" and used in food service items, such as cups, plates, bowls, cutlery, clamshell takeout containers, and rigid food containers. It's also used in packing peanuts, compact disc cases and other applications.

FIRED UP AND
READY TO GO
BACK-TO-SCHOOL
PVC-FREE!

Additional Green and Healthy **Back to School Resources:**

Promote Safer Purchasing in Your Children's School!

Let's face it, schools buy lots of stuff. Computers. Office supplies. Flooring in schools. Cleaning products. Many of these products are often filled with toxic chemicals and materials, like vinyl plastic, flame retardants and phthalates. But what if we could change that? What if we could harness the power of our schools' spending to promote safer products that don't contain these harmful chemicals? What if schools could use their purchasing power to help transform the marketplace away from toxic chemicals? One of the fastest and most cost effective ways to improve school Indoor Air

Quality is to reduce the use of toxic products indoors.

To do just that, CHEJ and the Coalition for Healthier Schools have both published new fact-packs and guidebooks to assist schools in purchasing safer products. The fact-sheets and guidebook summarize the health hazards of toxic chemicals commonly found in products, relevant policies that promote safe products, summary case studies of governments and businesses that are phasing out the purchase of toxic goods, and cutting-edge resources for purchasers to identify and purchase safer products.

Download the new fact pack and guide:

1. Visit www.chej.org/greenpurchasing to download CHEJ's new fact-pack, check out our online presentation, and share them with purchasers/schools in your community to help promote a healthier community.
2. Visit http://www.healthyschools.org/documents/CHS_healthypurchasinghealthyschools.pdf to download **Coalition for Healthier Schools new Healthy Purchasing for Healthy Schools** guidebook and also share it with purchasers/schools in your community.

What Parents and School Personnel Can Do:

- 1- Find out if your school is already buying 3rd party certified green cleaning or PVC-free products.
- 2- If so, thank them for taking steps to save money and improve health; then ask school to look into additional benefits from other EPP/green products covered in the new fact pack and guide.
- 3- What else you can do:
 - **Schools:** ask vendors and local retailers to showcase their EPP/green products and specify EPP/green products and equipment
 - **Personnel:** look for or specify EPP/green products and equipment for classroom purchases
 - **Parents:** use parent associations to help buy EPP/green products for classroom use, or when shopping, look for EPP/green products for school and for your home.

Download the Wallet-Guide

For a handy “wallet-size” version of this Back-to-School Guide to PVC-free School Supplies, visit: <http://www.chej.org/publications/PVCGuide/PVCwallet.pdf>

For Parents Learn More & Get Involved!

We hope you find these tips useful as you go shopping for school supplies. Visit our website at <http://chej.org/campaigns/pvc> to sign up for our PVC Action Network e-mail list and learn more ways you can create and sustain a healthy environment for your family!

For Companies Want to Be in the Guide?

We may publish an updated version of this guide next year, so please send us information about your company's products if you'd like to be listed in future editions. To be considered, please e-mail mike@chej.org with the subject “PVC-free school supplies.”

What Can I Do? Take Action for Healthy PVC-Free Schools

PVC is also found in many other products in our nation's schools. Thankfully safer and cost-effective alternatives are already available for virtually every PVC product in our nation's schools. From safe plastics, to bio-based materials, there is a growing market replacing hazardous PVC products. **Here's how you can help today:**

- Educate yourself about where PVC is hiding in your school by visiting <http://www.chej.org/thisvinylschool> or downloading our fact-sheets at <http://chej.org/campaigns/pvc/projects/pvc-free-schools/>
- Encourage your school to renovate or build their school with PVC-free building materials such as PVC-free linoleum flooring and TPO roofing.
- Encourage your school district, county or state to adopt a healthy PVC-free policy to avoid the use of PVC building materials and office supplies in favor of safer cost-effective alternatives.
- Educate parents, teachers and students! Organize a screening of Blue Vinyl and Sam Suds for your PTA, teacher's union, or concerned students. See: <http://chej.org/campaigns/pvc/get-involved/promote-the-sam-suds-video/>
- Encourage organizations to endorse the campaign at <http://tinyurl.com/pvcfreeschools>.

About the Center for Health, Environment and Justice

CHEJ mentors the movement to build healthier communities by empowering people to prevent the harm caused by chemical and toxic threats. We accomplish our work by connecting local community groups to national initiatives and corporate campaigns. CHEJ works with communities to empower groups by providing the tools, strategic vision, and encouragement they need to advocate for human health and the prevention of harm.

Following her successful effort to prevent further harm for families living in contaminated Love Canal, Lois Gibbs founded CHEJ in 1981 to continue the journey. To date, CHEJ has assisted over 11,000 groups nationwide. Details on CHEJ's efforts to help families and communities prevent harm can be found on www.chej.org.
